**Cherokee Landfill
Incinerator Site**

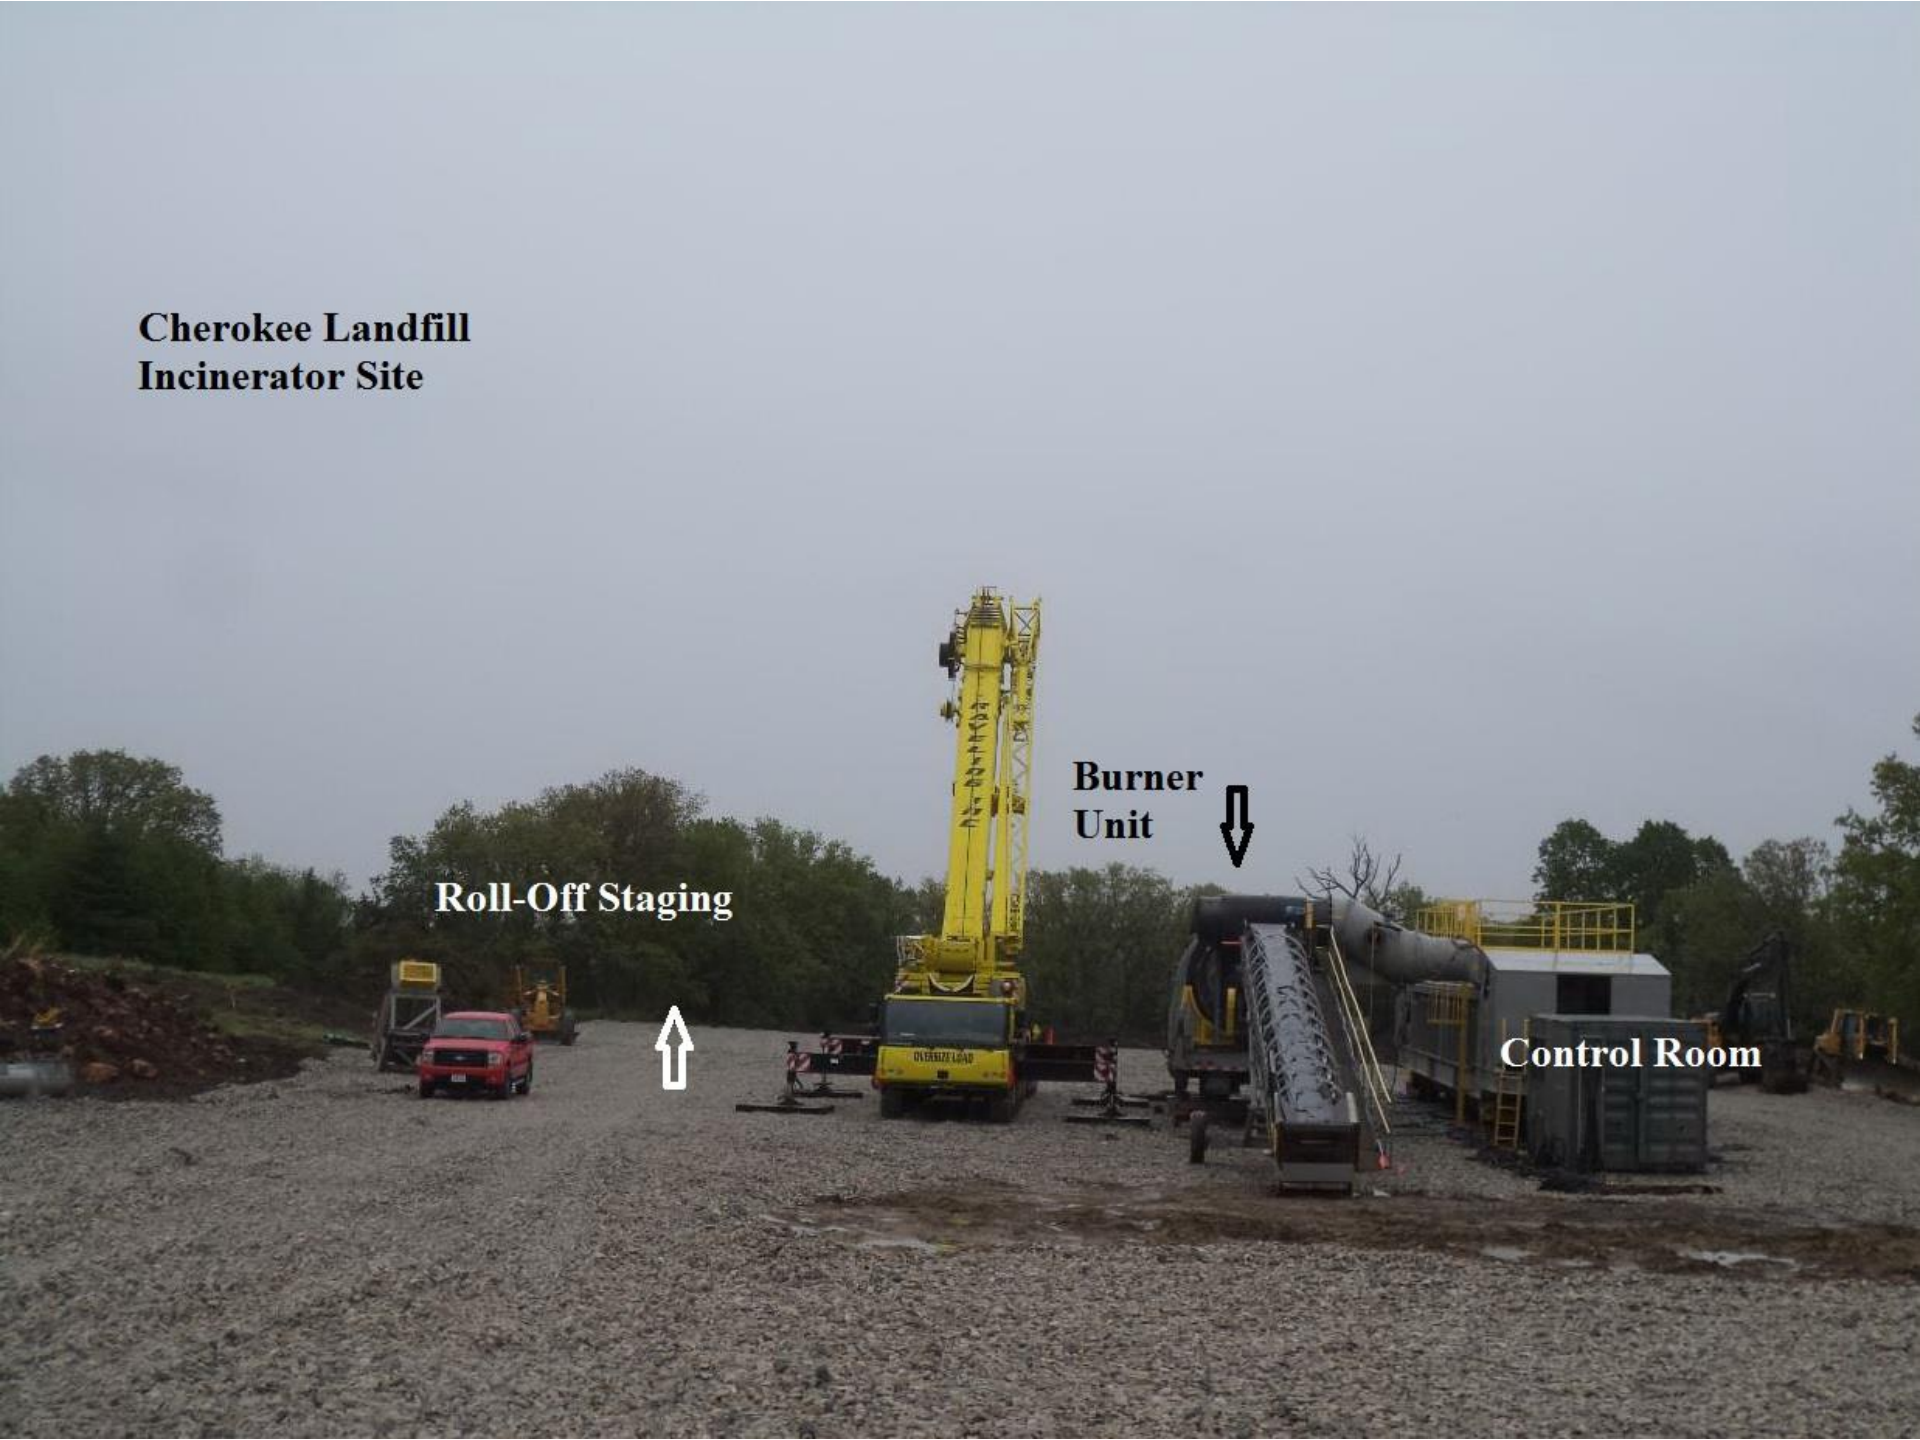

Roll-Off Staging

**Burner
Unit**

Control Room

Receiving units where the mortalities will be placed in. There are two holes in the end for the liquids to be pumped off. These will be set sub-grade at a 45 degree angle near the burner unit. The solids will be picked up with an excavator and placed in a hopper.

Red Unit is a holding tank for liquids that come from the mortalities.

The Green Unit is a small incinerator that was previously used in Sioux Co.
